复发性慢性胎盘炎性疾病的诊疗探索

王谢桐

(山东省立医院)

山东省立医院的王谢桐教授介绍了三种与复发性妊娠不良结局密切相关的胎盘疾病,包括病因不明的绒毛炎,慢性组织细胞性绒毛间炎、及大量周围纤维蛋白沉淀,可引起流产、胎儿生长受限以及子痫前期等妊娠期并发症,且存在明显复发性风险。目前有众多证据支持同种免疫“胎儿排斥”病因,随着对其临床意义认识的日益加深,可能会促使更广泛的免疫抑制治疗实验。王教授希望在临床上重视胎盘病理检查,认识慢性胎盘疾病的特征和发病机制,以期为妊娠期疾病诊治提供新思路,解决这些临床难题。同时强调在确定这些综合症的发病机制之前,临床需谨慎诊断和治疗,并对复发性病例进行探索性研究。
